The Perfect Planet

Lexile: 60L
Word Count: 357

Why is there life on Earth? Scientists haven't found any other planet that has life. Earth has living things because of its special features. These features are water, the climate, and the atmosphere. No other planet that we know of has features quite like Earth.

Without water, there would be almost no life on Earth. Luckily, water is **abundant**. It covers more than half of the planet. Most living things, including humans, need water to live. Humans can only live about a week without water. Water is also important because almost all living things are made up of it. Did you know that more than half of your body is made up of water? Plants and animals are made up of even more water than humans. Without water, life on Earth wouldn't exist.

Besides water, Earth also has a climate that supports life. Earth's climate is **ideal** for living things. That's because Earth is just the right distance from the Sun. It's close enough to receive sunlight, but far enough that we don't burn up. If Earth were farther from the Sun, like Mars, people would freeze to death. If Earth were closer to the Sun, like Venus, it would be much too hot. Earth's place in space gives us just the right temperature for life to exist.

Another reason there is life on Earth is because of its atmosphere. That is the air around Earth. Living things need the atmosphere for two reasons. It contains helpful gases and protects living things. One helpful gas is oxygen, which most living things need to breathe. It also contains carbon dioxide, a gas that **regulates** the temperature. It keeps Earth from getting too hot or too cold. The atmosphere also protects us from the Sun's harmful rays. The gases in the atmosphere create a screen. The screen blocks most of the Sun's dangerous rays, but lets helpful heat and light pass through.

Without Earth's water, climate, and atmosphere, the planet would be a lifeless rock. Life can't exist without these special features. Scientists have studied many planets. However, they haven't found any that can support life quite like Earth.

Impacts from large asteroids and comets could harm life on Earth. Luckily, Earth's atmosphere protects against them. According to NASA, an automobile-sized asteroid hits the atmosphere about once a year but burns up before reaching Earth's surface.

Name: _____

The Perfect Planet

Key Ideas and Details Questions

Complete these questions after your first read. Use evidence from the text to support your answers.

1.) According to the text, why does Earth have a better climate to support life compared to Mars or Venus? Use evidence from the text to support your answer. *RI.1*

2.) According to the text, why is water important to human life, animal life, and plant life? Use evidence from the text to support your answer. *RI.1*

3.) What is the main idea of the text? *RI.2*

4.) How are carbon dioxide and oxygen gases similar? How are they different? Use evidence from the text to support your answer. *RI.3*

25	26	27	28	29		
Memorial Day						

- Expanded form
- Word Form
- Round to the tens place
- Round to the ten thousands place
- Add 21,052
- Subtract 14,008
- Multiply by 47
- Divide by 47
- Even or Odd
- Create and Equation to equal the number. You must include +, -, x, ÷. You can choose to use parenthesis (), brackets [], or braces {} if you want an extra challenge.

Multiplying Fractions

1 a. $10 \frac{1}{6} \times 2 \frac{7}{12} =$

1 b. $1 \frac{2}{4} \times 6 \frac{4}{6} =$

2 a. $11 \frac{2}{7} \times 4 \frac{11}{12} =$

2 b. $8 \frac{2}{6} \times 3 \frac{1}{9} =$

1

Dividing fractions by fractions

Grade 5 Fractions Worksheet

Find the quotient.

1. $\frac{1}{4} \div \frac{9}{10} =$ _____

2. $\frac{5}{9} \div \frac{1}{2} =$ _____

3. $\frac{1}{3} \div \frac{6}{9} =$ _____

4. $\frac{8}{10} \div \frac{2}{5} =$ _____

5. $\frac{3}{8} \div \frac{7}{8} =$ _____

2

- USE BRAIN POP TO VIEW VIDEOS ON TOPIC OR YOUTUBE
- NEED FIVE SHEETS OF PAPER TO DOCUMENT WORK, WEEKLY, OR NOTEBOOK

The Survival of Tigers

Tigers have special features and skills which helps them to survive and easily adapt to conditions of their living area. These special features and skills are called adaptations.

Tigers rule the jungle because they are powerful and effective hunters. Their claws are very sharp. They use their sharp claws to fight each other and kill prey. Tigers are muscular which gives them the ability to swim and run to capture prey.

Did you know that a tiger has stripes not just to look pretty, but to camouflage, or blend in with their surroundings? Their striped coat creates similar patterns to sunlight beaming through trees and jungle grasses. Every single tiger is unique. No two tigers have the same patterns of stripes.

Tigers are nocturnal hunters because they are able to see and hunt at night. They also have extremely sensitive hearing capabilities which makes it nearly impossible for prey to escape.

A behavioral adaptation of the tiger is moving into areas of dense vegetation because that is where most of the animals they eat live. Some of their favorite meals include pigs, deer, rhinoceroses, and small elephants.
