

Topic 5 lesson 4

1. What are four types of severe storms?
2. A certain severe storm causes much property damage from heavy rains and winds that travel in a straight line. What type of severe storm has these characteristics? Why don't the other types of storm apply to this description?
3. Why does the damage from floods last longer than the storms that produced them?
4. The circle graph shows the percentage of deaths from hurricane related causes from 1970 to 1999. Based on the facts in the lesson and these data, what do you think would be important for authorities to do to prepare for a hurricane.
