# Chapter <br> 12. Letter 

Dear Family,
During the next few weeks, our math class will be learning about customary and metric units of length, weight/mass, and liquid volume. We will also find elapsed time and learn to compute with mixed measures.

You can expect to see homework on how to use measurement benchmarks and how to compare units.
Here is a sample of how your child will be taught to compare sizes of metric units of length.

## Vocabulary

decimeter (dm) A metric unit for measuring length or distance
fluid ounce ( fl oz ) A customary unit for measuring liquid volume
line plot A graph that shows the frequency of data along a number line
second $A$ small unit of time

## P MODEL Compare the Relative Size of Centimeters and Millimeters

Look at a centimeter ruler.

Each labeled mark on the ruler is 1 centimeter.
The small marks between centimeters are millimeters.
1 centimeter $=10$ millimeters
1 centimeter is 10 times as long as 1 millimeter.
1 millimeter is $\frac{1}{10}$ or 0.1 of a centimeter.

## Activity

Have your child commit basic customary and metric units of measure to memory. Work together to make flash cards with measurement units, and have your child practice relating and comparing units. Use daily activities, such as meals and cooking, as opportunities for practice. For example, "If you start with 1 quart of juice and drink 3 cups, how many cups of juice are left?"

## Capítulo <br> (12. pararta casa

Querida familia,
Durante las próxima semanas, en la clase de matemáticas aprenderemos las unidades usuales y métricas de longitud, peso/masa y volumen líquido. También aprenderemos a hallar el tiempo transcurrido y a calcular con medidas mixtas.

Llevaré a la casa tareas con actividades para aprender a usar puntos de referencia para medir y a comparar unidades.

Este es un ejemplo de la manera como aprenderemos a comparar los tamaños de las unidades métricas de longitud.

## Vocabulario

decimetro (dm) Una unidad métrica que se usa para medir longitud o distancia
onza fluida (fl oz) Una unidad usual para medir el volumen líquido
diagrama de puntos Una gráfica que muestra la frecuencia de los datos a lo largo de una recta numérica
segundo Una unidad pequeña de tiempo

## ? MODELO Comparar el tamaño relativo de centímetros y milímetros

Observa la regla dividida en centímetros.

Usa puntos de referencia para estimar medidas. Por ejemplo, tu dedo mide alrededor de 1 centímetro de ancho.

Cada marca señalada en la regla es de 1 centímetro. Las marcas pequeñas entre los centímetros son milímetros. 1 centímetro $=10$ milímetros

1 centímetro mide 10 veces más que 1 milímetro.
1 milímetro mide $\frac{1}{10}$ o 0.1 de un centímetro.

## Actividad

Pida a su hijo o hija que memorice las unidades básicas usuales y métricas de medida. Trabajen juntos para hacer tarjetas nemotécnicas con las unidades de medida, y pídale que relacione y compare unidades. Aproveche las actividades cotidianas, como las comidas o la cocina, para practicar. Por ejemplo, "Si comienzas con 1 cuarto de jugo y te bebes 3 tazas, ¿cuántas tazas de jugo quedan?"
$\qquad$
