

Launch Into Multiplication and Division Strategies

Home on the Range, Florida Style

When you think of cowboys, you might think of the Wild West, but Florida had its own version of cowboys called cowhunters. In the late 1800s, cowhunters on horseback herded cattle roaming freely on the ranges of Central Florida.

The cattle herded by the cowhunters were called scrub cows. A small but scrappy breed of cattle with tall horns, the scrub cows grazed openly in grasslands and swamps.

In 1949, all cows were banned from roaming freely, and the number of scrub cows decreased to 30. Measures were taken to preserve these Florida natives, and the number of scrub cows has been increasing ever since.

Three Reads

First, read to understand the situation.

Next, read to understand the math.

Then, read to ask what mathematical questions could be asked about the problem.

Florida currently is home to almost 900,000 head of cattle raised on over 18,000 cattle ranches across the state.

Cows on the Trail

- Scrub cattle were driven on a trail that extended from Florida's west coast to its east coast. The cows were then shipped to Cuba, the Bahamas, and Key West. Many roads, including U.S. Highway 441, started out as part of this trail.
- The last major cattle drive across the state of Florida was in 1937.
- The weight of a typical cow is between 1,400 and 1,600 pounds. A scrub cow weighs between 600 and 800 pounds.
- *Head of cattle* means number of cows.

Read the final question. Make a plan to solve the problem.

Florida currently is home to almost 900,000 head of cattle raised on over 18,000 cattle ranches across the state.

Corey wants to find how many cows are at each ranch if each ranch has the same number of cows.

Write, model, or draw to solve the problem.

Discuss with a partner or in a group.

**Math
Talk**

How might Corey's estimate not be useful in figuring out information about the number of cows on a ranch? What might be a more helpful question to ask?

Understand Multiplication and Division of Whole Numbers

Show What You Know

► **Place Value** Write the value of each digit for the given number.

► Understand Vocabulary

Write the words that answer the question “What am I?”

1. I am the answer to a division problem.

2. I am the amount leftover after making equal groups by dividing.

3. I am the number that is being divided.

4. I am one of two numbers being multiplied.

5. I am an estimated number that can be divided easily by another.

Name _____

Multiply by Multi-Digit Numbers

I Can multiply by multi-digit whole numbers.

Florida's B.E.S.T.

- Number Sense & Operations 5.NSO.2.1
- Mathematical Thinking & Reasoning
MTR.3.1, MTR.4.1, MTR.6.1, MTR.7.1

UNLOCK the Problem

A tiger can eat as much as 40 pounds of food at a time but it may go for several days without eating anything. Suppose a Siberian tiger in the wild eats an average of 18 pounds of food per day. How much food will the tiger eat in 28 days if he eats that amount each day?

Use place value and regrouping.

STEP 1 Estimate: 28×18

Think: $30 \times 20 =$ _____

STEP 2 Multiply by the ones.

$$\begin{array}{r} 28 \\ \times 18 \\ \hline \end{array}$$

$28 \times 8 \text{ ones} =$ _____ ones

STEP 3 Multiply by the tens.

$$\begin{array}{r} 28 \\ \times 18 \\ \hline \end{array}$$

$28 \times 1 \text{ ten} =$ _____ tens, or _____ ones

STEP 4 Add the partial products.

$$\begin{array}{r} 28 \\ \times 18 \\ \hline \\ + \\ \hline \end{array}$$

$\leftarrow 28 \times 8$

$\leftarrow 28 \times 10$

So, on average, a Siberian tiger may eat _____ pounds of food in 28 days.

Remember

Use patterns of zeros to find the product of multiples of 10.

$$3 \times 4 = 12$$

$$3 \times 40 = 120$$

$$30 \times 40 = 1,200$$

$$3 \times 400 = 1,200$$

$$300 \times 40 = 12,000$$

Example

A Siberian tiger was observed sleeping 1,287 minutes during the course of one day. If he slept for that long every day, how many minutes would he sleep in one year? Assume there are 365 days in one year.

STEP 1 Estimate: $1,287 \times 365$

Think: $1,000 \times 400 =$ _____

STEP 2 Multiply by the ones.

$$\begin{array}{r} 1,287 \\ \times 365 \\ \hline \end{array}$$

_____ $1,287 \times 5 \text{ ones} =$ _____ ones

STEP 3 Multiply by the tens.

$$\begin{array}{r} 1,287 \\ \times 365 \\ \hline \end{array}$$

_____ $1,287 \times 6 \text{ tens} =$ _____ tens, or _____ ones

STEP 4 Multiply by the hundreds.

$$\begin{array}{r} 1,287 \\ \times 365 \\ \hline \end{array}$$

_____ $1,287 \times 3 \text{ hundreds} =$ _____ hundreds, or _____ ones

STEP 5 Add the partial products.

$$\begin{array}{r} 1,287 \\ \times 365 \\ \hline \text{_____} \leftarrow 1,287 \times 5 \\ \text{_____} \leftarrow 1,287 \times 60 \\ + \text{_____} \leftarrow 1,287 \times 300 \\ \hline \text{_____} \end{array}$$

So, the tiger would sleep _____ minutes in one year.

**Math
Talk**

- Mathematical Thinking & Reasoning
MTR.2.1, MTR.4.1, MTR.5.1

Draw Conclusions

1. **MTR** Explain why you still need to make groups of 12 after Step B.

2. **MTR** Describe how you can use base-ten blocks to model the quotient $176 \div 16$.

Make Connections

The two sets of groups of 12 that you found in the Investigate are partial quotients. First you found 10 groups of 12 and then you found 3 more groups of 12. Sometimes you may need to regroup before you can show a partial quotient.

You can use a quick picture to record the partial products.

Divide. $180 \div 15$

MODEL Use base-ten blocks.

STEP 1 Model the dividend, 180, as 1 hundred 8 tens.

Model the first partial quotient by making a rectangle with the hundred and 5 tens. In the Record section, cross out the hundred and tens you use.

The rectangle shows _____ groups of 15.

STEP 2 Additional groups of 15 cannot be made without regrouping.

Regroup 1 ten as 10 ones. In the Record section, cross out the regrouped ten.

There are now _____ tens and _____ ones.

STEP 3 Decide how many additional groups of 15 can be made with the remaining tens and ones. The number of groups is the second partial quotient.

Make your rectangle larger by including these groups of 15. In the Record section, cross out the tens and ones you use.

There are now _____ groups of 15.

So, $180 \div 15$ is _____.

RECORD Use quick pictures.

Draw the first partial quotient.

Draw the first and second partial quotients.

Name _____

Partial Quotients

I Can use partial quotients to divide multi-digit whole numbers by 2-digit divisors.

Florida's B.E.S.T.

- Number Sense & Operations 5.NSO.2.2
- Mathematical Thinking & Reasoning
MTR.2.1, MTR.3.1, MTR.4.1, MTR.6.1, MTR.7.1

UNLOCK the Problem

People in the United States eat about 23 pounds of pizza per person every year. If you ate that much pizza each year, how many years would it take you to eat 775 pounds of pizza?

- Rewrite in one sentence the problem you are asked to solve.

Divide by using partial quotients.

$$775 \div 23$$

STEP 1

Subtract multiples of the divisor from the dividend until the remaining number is less than the multiple. The easiest partial quotients to use are multiples of 10.

COMPLETE THE DIVISION PROBLEM.

$$\begin{array}{r} 23 \overline{)775} \\ \underline{00} \\ 545 \end{array}$$

$$10 \times 23$$

$$10$$

STEP 2

Subtract smaller multiples of the divisor until the remaining number is less than the divisor. Then add the partial quotients to find the quotient.

$$775 \div 23 \text{ is } \underline{\hspace{2cm}} \text{ r } \underline{\hspace{2cm}}.$$

Write the quotient $775 \div 23$ as a fraction. _____

So, it would take you more than 33 years to eat 775 pounds of pizza.

Remember

Depending on the question, a remainder may or may not be used in answering the question. Sometimes the quotient is adjusted based on the remainder.

Example

Myles is helping his father with the supply order for his pizza shop. For next week, the shop will need 1,450 ounces of mozzarella cheese. Each package of cheese weighs 32 ounces. Complete Myles's work to find how many packages of mozzarella cheese he needs to order.

$32 \overline{)1,450}$		
$- \underline{320}$	$\underline{\hspace{1cm}} \times 32$	
$1,130$		
$- \underline{320}$	$\underline{\hspace{1cm}} \times 32$	
810		
$- \underline{320}$	$\underline{\hspace{1cm}} \times 32$	
490		
$- \underline{320}$	$\underline{\hspace{1cm}} \times 32$	
170		
$- \underline{160}$	$\underline{\hspace{1cm}} \times 32$	
10		$+ \text{ } \underline{\hspace{1cm}}$

$1,450 \div 32$ is $\underline{\hspace{1cm}}$ r $\underline{\hspace{1cm}}$.

So, he needs to order $\underline{\hspace{1cm}}$ packages of mozzarella cheese.

**Math
Talk**

**MTR
6.1**

Assess the reasonableness of solutions.

What does the remainder represent? Explain how a remainder will affect your answer.

Try This! Use different partial quotients to solve the problem above. Write the remainder as a fraction.

$$32 \overline{)1,450}$$

UNLOCK the Problem

The observation deck of a skyscraper in Chicago, Illinois, is 1,353 feet above the ground. Elevators lift visitors to that level in 60 seconds. About how many feet do the elevators travel per second?

Estimate. $1,353 \div 60$

STEP 1

Use two sets of compatible numbers to find two different estimates.

$$\begin{array}{r} 1,353 \div 60 \\ \downarrow \\ 1,200 \div 60 \end{array}$$

$$\begin{array}{r} 1,353 \div 60 \\ \downarrow \\ 1,800 \div 60 \end{array}$$

STEP 2

Use patterns and basic facts to help estimate.

$$12 \div 6 = \underline{\hspace{2cm}}$$

$$120 \div 60 = \underline{\hspace{2cm}}$$

$$1,200 \div 60 = \underline{\hspace{2cm}}$$

$$18 \div 6 = \underline{\hspace{2cm}}$$

$$\underline{\hspace{2cm}} \div \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

$$\underline{\hspace{2cm}} \div \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

The elevators travel about _____ to _____ feet per second.

The more reasonable estimate is _____ because

_____ is closer to 1,353 than _____ is.

So, the observation deck elevators in the skyscraper travel

about _____ feet per second.

Example Estimate money.

Miriam saved \$650 to spend during her 18-day trip to Chicago. She doesn't want to run out of money before the trip is over, so she plans to spend about the same amount each day. Estimate how much she can spend each day.

Estimate. $18 \overline{) \$650}$

$$\$600 \div \underline{\hspace{2cm}} = \$30 \quad \text{or} \quad \underline{\hspace{2cm}} \div 20 = \$40$$

So, Miriam can spend about _____ to _____ each day.

**Math
Talk**

MTR Engage in discussions on mathematical thinking.

Would it be more reasonable to have an estimate or an exact answer for this example? Explain your reasoning.

- MTR** Which estimate do you think is the better one for Miriam to use? Explain your reasoning.

Try This! Use compatible numbers.

Find two estimates.

$$52 \overline{)415}$$

Estimate the quotient.

$$38 \overline{) \$2,764}$$

Math Board

Use compatible numbers to find two estimates.

1. $22 \overline{)154}$

2. $68 \overline{)503}$

3. $81 \overline{)7,052}$

$140 \div 20 = \underline{\hspace{2cm}}$

$160 \div 20 = \underline{\hspace{2cm}}$

✔4. $33 \overline{)291}$

✔ 5. $58 \overline{) 2,365}$

6. $19 \overline{)45,312}$

On Your Own**Use compatible numbers to find two estimates.**

7. $42\overline{)396}$

8. $59\overline{)4,130}$

9. $28\overline{)22,684}$

Use compatible numbers to estimate the quotient.

10. $19\overline{)22,107}$

11. $25\overline{)595}$

12. $86\overline{)7,130}$

13. At an orchard, 486 green apples are to be organized into 12 green baskets and 633 red apples are to be organized into 31 red baskets. Use estimation to decide which color basket has more apples. About how many apples are in each basket of that color?

14. A store owner bought a large box of 5,135 paper clips. He wants to repack the paper clips into 18 smaller boxes. Each box should contain about the same number of paper clips. About how many paper clips should the store owner put into each box?

15. Explain how you can use compatible numbers to estimate the quotient of $925 \div 29$.

Problem Solving · Applications

Use the picture to solve Problems 16 and 17.

16. Use estimation to decide which building has the tallest floors. About how many meters is each floor?

17. **MTR** About how many meters tall is each floor of the Chrysler Building? Use what you know about estimating quotients to justify your answer.

18. **WRITE** *Math* Explain how you know whether the quotient of $298 \div 31$ is closer to 9 or to 10.

19. Eli needs to save \$235. To earn money, he plans to mow lawns and charge \$21 for each. Write two estimates Eli could use to determine the number of lawns he needs to mow. Decide which estimate you think is the better one for Eli to use. Explain your reasoning.

20. Anik built a tower of cubes. It was 594 millimeters tall. The height of each cube was 17 millimeters. About how many cubes did Anik use? Explain your answer.

275 meters,
64 floors,
Williams
Tower,
Texas

295 meters,
76 floors,
Columbia
Center,
Washington

319 meters,
77 floors,
Chrysler
Building,
New York

Interactive Examples

Use compatible numbers to find two estimates.

21. $18 \overline{)1,322}$

22. $12 \overline{)478}$

23. $33,671 \div 12$

24. $2,242 \div 33$

$1,200 \div 20 = 60$

$1,400 \div 20 = 70$

Use compatible numbers to estimate the quotient.

25. $82 \overline{)5,514}$

26. $61 \overline{)5,320}$

27. $28 \overline{)776}$

28. $23 \overline{)16,259}$

Problem Solving

29. A cubic yard of topsoil weighs 4,128 pounds. About how many 50-pound bags of topsoil can you fill with one cubic yard of topsoil?

30. An electronics store places an order for 2,665 USB flash drives. One shipping box holds 36 flash drives. About how many boxes will it take to hold all the flash drives?

31. **WRITE** *Math* Create a division problem with a 2-digit divisor.

Using more than 1 set of compatible numbers, observe what happens when you estimate using a different divisor, a different dividend, and when both are different. Using a calculator, compare the estimates to the answer and describe the differences.

Lesson Check

- 32.** Geneva has 567 earmuffs in stock. If she can put 18 earmuffs on each shelf, about how many shelves does she need for all the earmuffs?
- 33.** Mr. Franchot pays \$327 for one dozen collector's edition baseball cards. About how much does he pay for each baseball card?

Spiral Review

- 34.** Demont can frame 9 pictures each day. He has an order for 108 pictures. How many days will it take him to complete the order?
- 35.** Madeleine can type 3 pages in one hour. How many hours will it take her to type a 123-page report?
- 36.** Suppose you round 432,575 to 433,000. To what place value did you round the number?
- 37.** Etoile's catering company received an order for 118 apple pies. Etoile uses 8 apples to make one apple pie. How many apples does she need to make all 118 pies?

Chapter Review

- is between

500 and 600

- ☐ False

4. Estimate the quotient of $42,576 \div 68$.

4a. Show how you use compatible numbers to get two estimates.

4b. Explain how you know which is the better estimate.

5. Estimate. Then find the product.

Estimate: _____

$$\begin{array}{r} 5,601 \\ \times 87 \\ \hline \end{array}$$

6. Jeffery wants to save the same amount of money each week to buy a new bike. He needs \$252. If he wants the bike in 14 weeks, how much money should Jeffery save each week?

\$ _____

7. Sofia built a block tower that was 1,006 millimeters tall. The height of each block was 22 millimeters. About how many blocks did Sofia use?

about _____ blocks

Name _____

8. Darnel divided 575 by 14 by using partial quotients. What is the quotient? Explain your answer using numbers and words.

$$\begin{array}{r}
 14 \overline{) 575} \\
 - \quad \boxed{} \\
 \hline
 435
 \end{array}$$

10×14

10

9. For 9a–9c, choose Yes or No to indicate whether the statement is correct.

9a. $623 \div 17$ is $36\frac{11}{17}$. ☐ Yes ☐ No

9b. $9,457 \div 61$ is $155\frac{2}{61}$. ☐ Yes ☐ No

9c. $13,657 \div 28$ is $177\frac{1}{8}$. ☐ Yes ☐ No

10. Divide. Draw a quick picture.

$156 \div 12 = \boxed{}$

$\boxed{} = 100$
 $\boxed{} = 10$
 $\bigcirc = 1$

11. There are 165 students at theater camp. There are 11 groups. If the same number of students is in each group, how many students are in each group? Draw a quick picture to solve.

_____ students

12. Choose the compatible numbers that will give the best estimate for $429 \div 36$.

☐ 300		☐ 60
☐ 350	and	☐ 50
☐ 440		☐ 40

13. Raquelle earns \$16 per hour. For 13a-13d, select True or False for each statement

13a. Raquelle earns \$46 for 30 hours of work.

☐ True ☐ False

13b. Raquelle earns \$384 for 24 hours of work.

☐ True ☐ False

13c. After she has worked 168 hours, Raquelle will have earned \$672.

☐ True ☐ False

13d. If she works 1,397 hours this year, she will make \$22,352.

☐ True ☐ False

Name _____

14. Lindsey earns \$33 per day at her part-time job. Complete the table to show the total amount Lindsey earns.

Lindsey's Earnings	
Number of Days	Total Amount
3	
8	
14	

15. Write the letter for each quick picture under the division problem it represents.

$$156 \div 12 = 13$$

$$168 \div 12 = 14$$

$$144 \div 12 = 12$$

16. Jean Claude's factory produces 1,840 cases of pencils daily. How many cases can the factory produce in 180 days?

_____ pencils

17. Rasheed needs to save \$231. To earn money, he plans to wash cars and charge \$12 per car. Write two estimates Rasheed could use to determine how many cars he needs to wash.

18. Shiloh tracks her sleeping patterns and finds that she sleeps an average of 479 minutes each night.

- 18a. How many minutes of sleep does she get in 4 weeks?

_____ minutes

- 18b. About how many hours is this? (Hint: There are 60 minutes in a hour.)

about _____ hours

19. The Pico family made 24,784 ounces of vinegar. The vinegar is packaged into 16-ounce bottles. How many bottles of vinegar can they fill?

_____ bottles
