

## **Data Analysis**

- This is the section where you get to write down your reflections of the experiment.
- Your data analysis should be about a paragraph and just explain how the procedure went.
- Be sure to document any notes or experiences that occurred during the experiment procedure.
- Be sure to show data in the form of charts or graphs. This website is a great place to go to help with creating charts and graphs. <https://nces.ed.gov/nceskids/graphing/classic/>
