

Exploring Programming Languages

In this activity, you will research three popular programming languages and create a brief report about them.

1. Using a search engine, determine the three most popular programming languages.
2. Locate two or three credible research resources for each language.
3. Review the information about each language.
4. Using a word processor, create a brief report that includes the following for each language:
 - The name of the language
 - The type of language it is
 - What the language is most commonly used to create
 - One or two advantages and disadvantages of this programming language
5. If in a class, submit your report to your teacher as directed.
